Sheikh Zayed, Giza, Egypt. // Mobile: (+20) 1273122020 // Email: zeina.m.ghannam@gmail.com

I work at the intersection of strategy and execution, shaping what gets built and why, then making it real. Currently in an award-winning sustainability team at a multinational financial institution, where I own the business definition of a workflow-digitization tool built alongside engineering and data-visualization teams: I decide which metrics leadership sees, how the data flows, and what decisions it should drive.

My background spans international development, management consulting, and ESG, and the common thread is the same: find the real problem through research, decide what's worth doing, and deliver it under real constraints. I've run field discovery that redirected program strategy toward an unserved segment, designed measurement to prove whether an intervention actually worked, verified vendor data that turned out to be off by 3.4x, and built and shipped a medication inventory app of my own that helped users avoid purchasing 90.9% of the medications they considered purchasing.

I care most about the decisions upstream of execution, what to build, what to leave out, and how you'll know if it worked.

PRODUCT INNOVATION PROJECTS

"Find My Meds", June 2026, Web-based Application

Problem:

Noticed my family was repeatedly buying medications they already owned and traced it to the real cause: Invisible Inventory, the users don't know what medications they already have, so they keep ordering more.

Product Solution:

An app where users search by 'illness' if they don't know which drug to use, which gives them a result of all available drugs in their cabinet with a picture of its location, OR by 'medication' name if they already know which medication they want.

Impact:

In 3 Weeks, users have logged that they saved a medication purchase with 10 different medications and only purchased 1 new medication that they didn't own or have a replacement for, this makes the Purchase Avoidance Rate: **90.9%**.

EXPERIENCE

Product Manager, BeReal, August 2026 – October 2026 (Short-term Project)

Worked on a short-term project with French social media app 'BeReal' to come up with a new feature to boost monetization and MAUs.

- Owned the process of coming up with a new feature from discovery through prototype and pitch.
- Ran product discovery combining market and industry research (Statista, IBISWorld, Crunchbase) with engagement and traffic analysis (Similarweb, Sensor Tower, SEMrush) to ground feature ideas in the app's real growth and retention dynamics.
- Mapped the end-to-end user journey and analyzed behavioral data, app-store reviews, and social feedback to surface user pain points and unmet needs, then translated recurring patterns into a prioritized product opportunity.
- Benchmarked BeReal against direct and adjacent competitors in a feature and positioning matrix to define where a new feature could differentiate rather than duplicate.
- Wrote a PRD and user flows (happy path and state variations), built a working prototype, and pitched the feature directly to the US head of BeReal.

Consultant, E2E Business Consulting. October 2025 – Ongoing.

Advised FMCG clients on pricing, positioning, and marketing decisions, grounding each recommendation in independently verified market and vendor data.

- Ran a competitive pricing scan across 20 products and 25 competitors, comparing in-store, e-commerce, and online pricing across 5 retailers, and co-recommended the pricing strategy and brand positioning the client adopted.
- Delivered market research for a client rebrand across the US, Egypt, and Gulf markets, combining secondary research with a 500-respondent primary survey to ground direction in market evidence.
- Built a weighted decision matrix scoring 17 influencers that would potentially market a client's product on verified reach, cost-per-view, audience fit, and content type, and recommended a mix optimized for reach efficiency and audience diversity over raw follower count; the client adopted the recommendation.
- Independently verified agency-supplied influencer data by calculating true average reach from recent posts and applying cost-efficiency metrics including cost-per-view, which corrected vendor over-selling by 3.4x and giving the client a reliable basis for spend decisions.

EFG Hermes Holding, September 2023 – Current

Integrated sustainability tools into financial and investment cycle of EFG Holding's different business lines such as Investment Banking, Private Equity, and Microfinance amongst other business lines.

Assistant Sustainability Manager, October 2023 - Current

- Owned the business definition of a workflow-digitization tool built with engineering and data-visualization teams, replacing manual KPI collection across 5 business lines with an automated tracker featuring routed requests, reminders, role-based access, and executive reporting.
- Evolved the original plan to present raw KPIs to the executive committee and board, instead designing every view around prior-year score, current score, and target — and adding a Plan & Recommendation layer that diagnoses each gap and proposes how to close it, so leadership receives decisions to make rather than data to read.
- Introduced adoption-rate tracking that wasn't in the original scope, giving leadership its first visibility into whether business lines were actually using the ESG framework rather than just reporting on it.

Senior Sustainability Officer, October 2024 - October 2025

- Ran user discovery for an employee carpooling app rather than accepting a stakeholder's assumption that demand didn't exist — designing a survey that reached 300 of 800+ employees to test willingness, incentive sensitivity, and feature priorities, now shaping the relaunch scope.

Sustainability Officer, September 2023 – October 2024

- Standardized inconsistent cross-team workflows by writing a process manual and RACI matrix for each engagement, replacing an ad-hoc approach with a repeatable system across all business lines.

Project Coordination Consultant, CARE International. February 2023- August 2023.

Delivered a multi-city business incubator program under tight budget and timeline constraints, from partnerships and screening to workshop operations.

- Rewrote a program budget for a business incubator project that didn't cover the planned scope and secured approval, which was approved for a 100% increase, preserving full delivery rather than cutting the program to fit the original constraint.
- Screened hundreds of applications from business owners across Cairo, Alexandria, and Damietta, building the criteria used to distinguish genuinely differentiated ideas with commercial viability and realistic startup costs from conventional ones.
- Upgraded several program partners from a proposed trainer to established firms/agencies, raising the quality bar so participants received guidance from well-known practitioners.
- Built the stakeholder map and partnership network across local government authorities and delivery partners, and owned end-to-end workshop operations — venues, trainers, logistics, and participant

experience.

Project Coordinator, Al-Shehab Institution for Comprehensive Development, April 2021 - August 2023

Ran a healthcare program where I managed awareness raising sessions on different illnesses and then offered services such as lab tests, gynecologist and psychologist sessions amongst other services to returning customers.

- Delivered healthcare services to 4,000+ customers with an 81% customer return rate for follow-up services, using tracking data to identify unreached users and target outreach.
- Proposed and drove a strategy shift after field research and needs assessments surfaced an unserved user segment, expanding program scope to reach them and validating direction against qualitative and quantitative evidence.
- Designed a pre/post assessment to measure whether users retained health information during the awareness raising sessions, average comprehension across 4,000 users rose from 34% to 76%, with a 90% user satisfaction rate.
- Migrated a 5-person field team from paper-based tracking to a digital CRM system, giving the team its first per-user view of service uptake and coverage gaps.

EDUCATION

- **BA (Honors) Sociology, 2020, 4.0 GPA (1st), University of Sussex, Brighton, England.**

Courses such as Qualitative and Quantitative Data, Economics of Society, and Education, amongst other modules.

- **IB, International Baccalaureate Degree, 2017, Hayah International Academy, Cairo, Egypt**

CERTIFICATIONS

- IBM – **Certificate in Product Management**
- NaviGrowth — **Project Management Professional (PMP)**
- University of Virginia - **Digital Product Management**

SKILLS

- **Product Strategy:** Competitive Analysis, User research, Survey design, market analysis, market sizing.
- **Data & Analytics:** SQL, Excel, Power BI, SPSS, Kobo Toolbox, Nvivo.
- **Product Analytics:** Mixpanel.
- **Management Tools:** Asana, Clickup, Monday, Microsoft Planner.
- **Vibe Coding:** Glide, Lovable, Claude Code.
- **Design Tools:** Canva, Claude Design.
